

# JTEKT : IATF CERTIFICATION

## A GLOBAL CERTIFICATION FOR THE AUTOMOTIVE INDUSTRY

IATF certification is a global quality standard that structures the entire automotive supply chain. Discover what it means in practice for our IAM products.

### A bit of history

Created in 1999 by the members of the International Automotive Task Force and submitted to the International Organization for Standardization (ISO) for approval and publication, this certification was designed to define a global framework, thereby harmonising certification systems for the automotive industry.

### Key figures (Source: IATF, 20/02/2026)

**10 893**

certified sites in Europe (Germany, Italy, Spain and France leading the way), representing more than 10% of sites worldwide.

**+79 %**

of the worldwide total represented by Asia-Pacific, the first geographical area to be certified.

### Why is IATF 16949 certification significant?

IATF 16949 determines the main quality standards of the worldwide automotive industry for:

**Scope covered**

- Quality management systems
- Automotive parts manufacturers
- Automotive industry suppliers

**The entire chain**

The whole supply chain is represented. All actors work to comply with this key quality standard, from manufacturer to supplier.

### What does it mean for our JTEKT IAM products?

All our products meet the quality standards required by car manufacturers. Unlike counterfeit products, being IATF certified means that the quality of our new products, our IAM products and our remanufactured products are alike.

### A certification that goes beyond our commitment to quality

As part of its commitment to continuous improvement, JTEKT combines IATF certification with other standards:

**IATF 16949**

**ISO 9001**

**ISO 14001**

**ISO 9001**

The benchmark standard for quality management, the universal foundation of quality management systems.

**ISO 14001**

The standard relating to environmental management systems, consistent with JTEKT's commitment to sustainability.
